

THE ANCIENT ORDER CONNECT JEFFREY DAHMER TO OTHER MURDERS AND 'ACCIDENTS'

●The table at right is a calendar which shows the days for 100 years, a century. It shows every year from 1900 through 1999 and what day of the century New Year's Eve was for that particular year. If you know any date and what day of the year (1 to 365) that date was, by adding to the New Year's Eve date for the previous year, you get the number for what day that day was in the century.

●Example: JEFFREY DAHMER killed victim JEREMIAH WEINBERGER on July 5, 1991. July 5 was the 186th day: ...186 New Year's Eve of 1990:33,238

●Total=33,424

The 36,525 days of a 100 year period by the last day of each year, New Year's Eve.

●As can be seen, JEFFREY DAHMER killed JEREMIAH WEINBERGER on the 33,424th day of the 1900's.

●With this table/calendar, anyone can get the number for any date in the century, from day #1 to day #36,525. This same table/calendar works for any 100 years: from 1000 to 1099, 1400 to 1499, 1700 to 1799, etc.

●The ANCIENT ORDER used these Laser Ray devices to make serial killer JEFFREY DAHMER kill the men shown in the victim's list here at right. Then they committed other murders and planned catastrophes, which they portray as accidents, and connected them directly to the dates of DAHMER's murders. They hid the connection by placing them in the hundreds of days apart. The years number 365 and 366 days and the months number 28 to 31 days. If any 2 occurrences are exactly 3,000 days apart, how can anyone know? In order to know, you'd need to know the number of each date in such a way that you could subtract them commonly. That is what the above table/calendar gives: the number each date is for the century. So when you subtract the lower number from the higher number, that gives the exact number of days between the 2 occurrences. That is what the ANCIENT ORDER does. I found this code
